

## **Image Processing**

**ECE 4367 / ECE 5367**

### **Project 4**

Design and implement a method to

1. Extract the periodic pattern that is vaguely visible in the image shown below.
2. Correct the image for non-uniform illumination.

Your code must read the provided input image from the current directory and display two output images corresponding to these two tasks.

You are to form a group with one other student and turn in a single project.

**Upload your source file named lastname1\_lastname2.\* to Blackboard.**
